

Project

QuantumPM

#### **Solution Overview:**

Denver International Airport (DEN) selected Project Online to manage its full portfolio of projects and operational work. They needed to be able to see all of their work in one place and track the time spent on everything they do, including day-to-day operations. Project Online, along with QuantumPM's **BIAdvantage** product for reporting and time management, was the perfect fit.

DEN is an innovative and process-focused organization with a strong sense of cooperation. They took this project from the starting point to full production for over 200 staff members with 100% compliance for time reporting in just a few short months. How was this possible? They focused on the critical few items that were essential and did not try to do everything at once:

- **Schedule management** – For the first production release, the focus was on inflight projects. Templates were built and projects were simplified to ensure that tracking is performed at the right level.
- **Collaboration** – Project data was gathered from many different SharePoint locations and placed in Project Sites to simplify and streamline both the collection and the management of project artifacts. This effort was not simple but it has resulted in a great deal of time savings now that all the key data is in the right place.
- **Time Management** – Team members were well-trained and participated fully in tracking their time to their projects and operational work. Everyone in the organization, including the leadership, now report their time on a weekly basis. Compliance is at or near 100% each week and accuracy is closely tracked.

With the help of QPM's **BIAdvantage** product, they have real time access and full validation of time entry and approvals. DEN uses this solution to produce metrics and to monitor participation and data accuracy. Nothing is left to chance.

#### **Company Overview:**

Denver International Airport is the 15th-busiest airport in the world and the fifth-busiest airport in the United States, with more than 53 million passengers traveling through the airport each year. It has been recognized as a leader in innovation for sustainability and energy management as the only US airport to have implemented ISO 14001 – certified environmental management system covering the entire airport. The airport is the primary economic engine for the state of Colorado, generating more than \$26 billion for the region annually.

#### **Footprint:**

The initial rollout included the entire IT Department. Next up is to add two more departments, Finance and then AIM so the airport can capture the full Capital Improvement Process lifecycle within their Project Online solution.

Once these two departments are in production, DEN can run its entire portfolio from Project Online. DEN believes it can eliminate several redundant systems which will save them money and improve their efficiency tremendously. Work begins on Phase 2 in late summer of 2016.
